The F/1 class have been enjoying their inquiry into how all living things go through a process of change. William brought in some monarch caterpillars for news and the class enjoyed learning the butterfly lifecycle by watching the different stages and finally releasing the butterflies into their natural environment.

Lilly brought in a turtle for news and after predicting the lifecycle of a turtle, the students wanted to search on the internet to find the lifecycle. They were surprised to find it starts as an egg.

At the end of last term, the students looked at the lifecycle of a sunflower. Students wondered how the seeds fit in the flower. In the holidays, Miss Hampel found a sunflower and students enjoyed looking at the seeds in the flower.

William and Reegan are having a close look at the sunflower and they are trying to pull out the seeds.
